the hci SOLUTION

nuntio

Secure Messaging

- HIPAA compliant secure messaging that allows easy HCIS integration for automated alerts and notifications
- Client or clientless access, no need to install application on smart phones
- Messaging consoles that allow you to monitor message status and enable workflows
- Person to person texting, group chats / texting
- Out of network secure texting with only a phone number or email (*1)
- JSON message integration from a print file, NPR report, text file, practically any data source. NO other messaging client has the integration capabilities of Nuntio messenger
- Smart consoles depicting message statuses, escalation or work flow processing
- Simple email-based enrollment opportunities, users can self-verify and setup their own smartphones
- Workflow widgets that allow processing verification steps into a message. Example: a patient transport message can require a wristband scan to verify the correct patient is being transported
- Secure image capture optional integration to MEDITECH or other scanning and archiving services (*2)
- SMS – non-secure messaging for appointment reminders and other non-patient specific messaging such as smoking cessation tips, or diabetes management reminders

Use Cases:
- Patient admission notifications
- Outpatient lab and imaging automated work-flow notifications
- Critical lab values with acknowledgment and reporting
- Imaging report notifications
- Secure image capture and index back to the medical record

(*1) This use case allows you to send one-time secure messages to out of network providers establishing a two-way secure communications channel

(*2) We can integrate into both MEDITECH and Non-MEDITECH imaging solutions
