MOM©
M-AT OBJECT MODULE

Delivering M-AT Data in your NPR Report

Comprehensive reporting allows hospitals to make educated decisions in viewing details from their environment. All departments rely on reporting to make operating decisions and position departments for success.

As MEDITECH hospitals move from Magic and Client Server to 6.X and Expanse, reporting has become challenging. The newest tools of Report Designer and Data Repository leave the mastery of NPR behind thrusting report writers into a territory that could have more limited deliverables.

MOM© gives report writers the comprehensive use of NPR AND M-AT Data, employing the flexibility and functions of NPR while including M-AT data.

With a set of NPR tools, uncomplicated install, and no hardware; individuals can readily include M-AT data. Simple commands allow you to get M-AT indexes, records, OIDs, Objects, and Fields directly into NPR reports. Revolutionize your use of NPR today by adding MOM©.

WHY DO YOU NEED MOM©?

- Include M-AT data in an NPR report; Report Designer Computed Fields

- Report Designer allows inclusion of NPR data in Report Designer but not vice versa

- Facilities have decided to keep NPR reports for NPR applications

- Report Designer does not have the capability to produce what you need

- NPR has unlimited capability, far beyond Report Designer

- Data Repository can be a challenge
